

# CONTENTS

## Volume 1

	<i>Page</i>
Foreword .....	xiii
Preface .....	xiv
Committees and Sponsors .....	xv
Units and Ferroalloy Nomenclature .....	xvi
 <b>SECTION 1</b>	
<b>Plenary and Keynote Addresses</b>	
The status of the ferroalloy industry with special reference to South Africa, <b>H. J. Smith</b> .....	3
Strategic planning parameters for the steel and ferroalloy industries, <b>P.H. Smith</b> .....	13
Plasma-arc technology for ferroalloys, Part II, <b>D.R. Mac Rae</b> .....	21
The availability and marketing of vanadium, <b>T. Jones</b> .....	37
Commercial relationships now and into the twenty-first century, <b>A.A. Apotsos</b> .....	43
 <b>SECTION 2</b>	
<b>Ferrochromium</b>	
The reduction of synthetic iron chromite in the presence of various metal oxides – a thermo-analytical study, <b>C.P.J. van Vuuren, J.J. Bodenstein, M. Sciarone and P. Kestens</b> .....	51
The solid-state reduction of chromite, <b>M.J. Niayesh and R.J. Dippenaar</b> .....	57
Kinetic aspects of chromite ore reduction with coal at 1200 to 1550°C, <b>D Neuschütz</b> .....	65
Solid-state fluxed reduction of LG-6 chromite from the Bushveld Complex, <b>P. Weber and R.H. Eric</b> .....	71
The importance of chromite pretreatment in the production of ferrochromium, <b>M. Honkaniemi, H. Krogerus, J. Daavittila and P. Oikarinen</b> .....	79
The melting behaviour of chromite ores and the formation of slag in the production of high-carbon ferrochromium, <b>S. Xu and W. Dai</b> .....	87
Plasma-arc smelting of fine chromium ores, <b>H.R. Larson, J.F. Elliott and B.R. Perkins Jr.</b> ...	93
The reduction of chromite in Fe–Cr–C–Si alloys, <b>O. Demir and R.H. Eric</b> .....	99
An evaluation of process alternatives for the reclamation of ferrochromium from slag, <b>J. Visser and W. Barrett</b> .....	107
Commissioning and operating an induction furnace at Zimasco (KweKwe Division) to melt high-carbon ferrochromium, <b>S. Jena and S.T. Ravasingadi</b> .....	113
Operating and marketing results of the production of intermediate-carbon ferrochromium in a CLU converter, <b>P.H.F. Bouwer</b> .....	119
Technology for the combined production of chromium metal and ferrochromium, <b>R.L. Wang</b> .	123
 <b>SECTION 3</b>	
<b>Ferromanganese</b>	
A case study of the production of high-grade manganese sinter from low-grade Mamatwan manganese ore, <b>P.C. Pienaar and W.F.P. Smith</b> .....	131
The production of special SiMn using the gas and powder injection process, <b>R. Kamata, Y. Kizu and H. Tsujimura</b> .....	139
The development of technology for the production of refined ferromanganese in China, <b>Z. Jinhua and L. Zhizhong</b> .....	145

High-productivity operation of a shaft-type ferromanganese smelting furnace, <b>S. Suzuki and M. Masukawa</b> .....	149
The two-stage production of high-carbon ferromanganese in a blast furnace: A method for the treatment of a lean manganese ore, <b>T. Zhang</b> .....	155
Solid-state decarburization of high-carbon ferromanganese, <b>P.J. Bhonde and R.D. Angal</b> .....	161
Thermodynamic activity of manganese oxide in ferromanganese slags, and the distribution of manganese between the metal and slag phases, <b>H. Cengizler and R.H. Eric</b> .....	167

#### SECTION 4

##### Silicon and Silicon Alloys

Silicon-metal production on a trial basis from river pebbles originating in Australia, <b>D.P. O'Shaughnessy, A.E. Firek and J.E. Trunzo</b> .....	177
The effect of reductant moisture on the production of 75 per cent ferrosilicon, <b>D. Retallick</b> .....	181
The production of high-quality silicon metal at Simcoa, <b>C.J. Szymkowski and J.M. Bultitude-Paull</b> .....	185
The refining of silicon and ferrosilicon, <b>J.K.S. Tuset</b> .....	193
On-line laser measurements of silica dust, <b>E.B. Gudmundsson and T. Hannesson</b> .....	201
The total quality programme at Bozel, <b>J. Finardi and I.C. da Silva</b> .....	205
Intermetallic compounds in metallurgical silicon, <b>T. Margaria, J.-C. Anglezio and C. Servant</b> .....	209

#### SECTION 5

##### Vanadium, Minor Ferroalloys, and Special Topics

The use of vanadium – A Brief review, <b>P.S. Mitchell</b> .....	217
Pyrometallurgical processing of vanadiferous slag using plasma/induction heating, <b>R.L. Howard, S.R. Richards, B.J. Welch and J.J. Moore</b> .....	225
Maximizing the return from electrode investments, <b>C.F. Fulgenzi</b> .....	233
The heat-recovery system at Minami-Iwate Works, <b>K. Kosaka, H. Ota and Y. Tamura</b> .....	237
Air-pollution control in the Amazonia region: Dust extraction in a silicon-metal plant, <b>R. Civile and H. de Raedt</b> .....	243
Electrical factors affecting the economic optimization of submerged-arc furnaces, <b>A. de Waal, I.J. Barker, M.S. Rennie, J. Klopper and B.S. Groeneveld</b> .....	247
The monitoring and repair of furnace linings at TEMCO, <b>M. Williams</b> .....	253
Planning for future ferroalloy production in South Africa, <b>M.A. von Below</b> .....	261

#### SECTION 6

##### Ferroalloys in Steelmaking

Wire injection of metallurgical powders into molten metal, <b>G.P. Crawford</b> .....	271
A semi-continuous autothermic reduction process for the production of ferroniobium, <b>R. de Fúccio, Jr, A. de Fúccio, E.W. Betz and C.A. de F. Sousa</b> .....	279
The optimization of parameters for the carbothermic production of ferroboron, <b>O. Yücel, O. Addemir and A. Tekin</b> .....	285

# CONTENTS

## Volume 2

	<i>Page</i>
Preface .....	xiv
Committees and Sponsors .....	xv
Units and Ferroalloy Nomenclature .....	xvi
<b>SECTION 1</b>	
<b>Plenary and Keynote Addresses</b>	
The potential of the 'chrome chain' for South Africa, <b>P.R. Hatty</b> .....	3
The continuous casting of stainless steels, <b>J.K. Brimacombe, S. Kumar, C.O. Hlady and I.V. Samarasekera</b> .....	7
Dephosphorization of stainless steels, <b>N. Sano and H. Katayama</b> .....	25
Nitrogen control in chromium steels, <b>R.J. Fruehan</b> .....	35
The potential of chromium as an alloying element, <b>G.T. van Rooyen</b> .....	43
Developments in zirconia sensors during the 1980's – Laboratory and in-plant applications in iron- and steelmaking, <b>M. Iwase</b> .....	49
<b>SECTION 2</b>	
<b>Chromium Steel and Alloys</b>	
The austenite–ferrite transformation in 11,5 per cent chromium steels, <b>P.G.H. Pistorius, H.J. de Klerk and G.T. van Rooyen</b> .....	65
High-chromium controlled-hardenability steels, <b>J. Hewitt</b> .....	71
Optimization of the AOD process at POSCO, <b>H.S. Song, S.M. Byun, D.J. Min, S.K. Yoon and S.Y. Ahn</b> .....	89
Mechanical properties of a 316L forging material modified for resistance to sensitization, <b>E. Protopappas, C.A. Smal and F.G. de Lange</b> .....	97
A simple experimental technique for the determination of MnO activities at 1600°C in (MnO–MgO–SiO <sub>2</sub> ) slags saturated with (MnO–MgO) solid solutions, <b>J.M.A. Geldenhuis, E.B. Pretorius and R.J. Dippenaar</b> .....	105
Carbothermic reduction and desulphurization of chromite with nickel oxide and sulphide, <b>W. Dresler, B.C. Jena and A. McLean</b> .....	111
Design criteria for stainless-steel structural members, <b>P. van der Merwe and G.J. van den Berg</b> .....	117
The effect of anisotropy on the fatigue and fracture of a 12 per cent chromium steel, <b>M.B. Cortie, C.J. Fletcher and W. Veldsman</b> .....	121
Metallography of high-carbon ferrochromium, <b>A. Lesko, E. Navara and T.R.C. Fernandes</b> . .....	131
The toughness of the heat-affected zone of welds in 11,5 per cent chromium steels, <b>J.J.J. Zaayman and G.T. van Rooyen</b> .....	137
Duplex ferrite–martensite steels containing 16 Wt per cent chromium, <b>R.D. Knutsen and R. Hutchison</b> .....	143
Reducing the nickel content in metastable austenitic stainless steel, <b>O.E. Schmid and R.D. Knutsen</b> .....	151
The effect of martensite content on the corrosion and mechanical properties of dual-phase 12 per cent Cr steels, <b>A. van Bennekom, L.M. Matthews, J.N. Tarboton and F.P.A. Robinson</b> .....	157

Influence of stress and electrochemical effects on initiation and morphology of pits in stainless steels exposed to an aqueous solution of boiling magnesium chloride, <b>D.J. Simbi, M. Dingwiza and B.D. Barker</b> .....	165
Corrosion resistance of intermediate chromium-alloy steels in mine waters, <b>P.V. Scheers, M.U. Kincer, T. Rumpf and J.J. McEwan</b> .....	173
Performance of buried 3CR12 pipes in various soil environments, <b>R.T. White and E.A. Duligal</b> .....	179
The influence of heat-tinted surface layers on the corrosion resistance of stainless steels, <b>T. von Moltke, P.C. Pistorius and R.F. Sandenbergh</b> .....	185
Analysis of preferred orientations in duplex chromium–nickel steels, <b>H.J. Bunge, A. ul Haq and H. Weiland</b> .....	197
From niche to commodity, 3CR12 – a ten-year scenario, <b>D.K. Maxwell, K. Dewar and I. Warrington</b> .....	203
Modern stainless steels to combat chloride-induced localized corrosion, <b>J. Olsson</b> .....	211
The influence of carbon content on the oxidation and wear resistance of Fe-20% Cr alloy at elevated temperatures, <b>J.D. Xing and Q.D. Zhou</b> .....	217
The susceptibility of 12 per cent chromium steels to stress–corrosion cracking, <b>R.F. Sandenbergh and P.G.H. Pistorius</b> .....	225
Stainless steel, with 11 per cent chromium and high yield strength, for welded constructions resistant to corrosion and abrasion, <b>J.C. Charenton, P. Rombeaux, B. Hurtaud and J.M. Hauser</b> .....	229
Influence of ruthenium content on the corrosion in sulphuric acid of a duplex stainless steel, <b>J.H. Potgieter, W. Skinner and A.M. Heyns</b> .....	235
The effect of an oxygen atmosphere on the creep-fatigue failure of iron–chromium alloys at 600°C, <b>E. Aghion, J. Ferreira and D. Eliezer</b> .....	241
Smelting reduction of chromite ore in an oxygen converter, <b>T. Izawa, H. Katayama and N. Sano</b> .....	245
Ferroalloy production by the smelting–reduction process with a coke packed bed, <b>H. Itaya, S. Taguchi, K. Igawa and T. Nozaki</b> .....	253
A dynamic process-control system for steel converters, <b>P. Hahlin</b> .....	259
The role of ferroboron and ferrotitanium in steels: production methods, quality aspects, and addition techniques, <b>R.W. Bebbington</b> .....	263
